PADI DISCOVER SCUBA or SCUBA REVIEW OR JUST COME AND PLAY SATURDAY JUNE 4, 2021

Why PADI Scuba Review?
Are you a certified diver, but haven't been in the water lately? Are you looking to refresh your dive skills and knowledge? Are you a PADI Scuba Diver and want to earn your PADI Open Water Diver certification? If you answered yes to any of these questions then PADI Scuba Review is for you.

What do I need to start?
Hold a scuba certification
Minimum age: 10 years old

What will I do?
First, you'll review the safety information you learned during your initial training. Then, you'll head to the pool to practice some of the fundamental scuba skills

How long will it take?
A couple of hours

What will I need?
If you don't have your own gear you will need to rent gear.

I don't want a review, but I want to play?
No problem, Just sign up and come play in the pool for a couple of hours....we want you diving!

- \$75.00 for Refresher (includes gear rental and pool fee)
- No Refresher, don't have gear, but you want to play? Full gear rental \$38.00 plus and pool fee.
- Have all your gear but just want to play? \$15.00
- IF YOU BOUGHT A SCUBA SYSTEM FROM US, IT'S FREE

STARTS AT NOON

MAKE EVERY WEEKEND A DIVE WEEKEND

TRAINING AT BEAVER LAKE ARKANSAS

Beaver Lake is a man-made reservoir in the Ozark Mountains of Northwest Arkansas and is formed by a dam across the White River only a few hours drive from Wichita. Beaver Lake waters are deep, clean, and clear. Beaver Lake is optimal for scuba diving because the water is deep and visibility is great making for interesting sites.

ADVANCED Open Water Course

The Advanced Open Water Diver Course (AOW) is the next step in learning advanced skills directly applicable to scuba diving. Frequently, an AOW card is just the ticket to diving at a variety of more sites. For example, we know of several places in the Philippines, Malaysia, Australia, and some wreck sites in Florida who will not let you dive at certain, more advanced sites, unless you have the AOW or above certification. The reason is that the operators don't want to risk putting OW divers into certain advanced level dive conditions such as currents or deep, blue water, environments. They know that PADI AOW certified divers have the skills and experience necessary for such sites.

There are a total of 5 dives necessary to complete the course. The required 2 Core dives are Deep and Underwater Navigation. You can choose the remaining 3 Adventure Dives. This course is for newly certified divers as well as divers with more experience who wish to expand their knowledge and practical skills. Also, if you don't have enough time to complete the full AOW course, the Adventure Diver rating is awarded after completion after any 3 Adventure Dives.

Why should you take the Advanced Open Water Course?

Open Water Divers have learned the basics, the "how" of diving. After a few dives, there is a need to expand that dive knowledge and learn practical skills which can increase your enjoyment of diving. Ever surface far away from the boat and have a long surface swim back? With the Navigation dive, you will learn how to prevent that situation, using compass as well as natural navigational aids to assist in your underwater journey. For deep diving, there are special concerns, and as an Open Water Diver, you are certified to dive 18 meters/60 feet. After completing the AOW course, that level is extended to 30 meters/100 feet.

If you really want to advance your skills and be more comfortable in the water, taking this course is the way to do it. We have openings for OUR Beaver lake trips. Give us a call and schedule your course today!

AMBER WAVES DIVING REPAIR CENTER

Properly functioning gear is crucial
Your safety depends on it. That's why we are the best technicians in the business to service your gear.

What to expect
We only use certified technicians that always follow the manufacturer guidelines. Conscientious and thorough, we examine every part of your gear. We're always on the lookout for wear and corrosion, immediately swapping out anything worn or damaged. Expect the best from us!

WHY BUY GEAR?

Whether an item of dive gear is considered essential or desirable, each was conceived and developed to satisfy a definite need and perform a specific function. From regulator to gauges, mask to fins, and a buoy compensator to wet suit, recreational scuba equipment is purposeful, and a big contributor to the overall fascination and attraction of diving. Acquiring your own dive equipment is a major factor in the enjoyment of the sport. Sure, you can rent gear at many dive destinations, but do you really want to rely on the availability of much-used rental equipment for your personal safety and enjoyment of diving?

Owning your own dive gear has many advantages. As a beginning Open Water certification student, you can speed your dive equipment and progress quickly into the open-water environment by purchasing and using a basic dive equipment package: regulator and BC in addition to mask, snorkel, and fins.

Learning your own dive involves a lot more than learning how to breathe through a regulator underwater. You learn the art of buoyancy control, the subtleties of swimming and streamlining, and a host of other skills. Acquiring these skills quickly and comfortably has a lot to do with the equipment you use in training. If the BC is too small, you will struggle with it, which interferes with your learning. Fit and comfort are the prime criteria in selecting most items of dive gear, and in achieving maximum safety and pleasure underwater. Owning your own gear is the best way to ensure that your gear fits correctly and comfortably.

Even if loaner or rental equipment fits well, it may not be right for you because of particular features — or lack of them. Features are what distinguish one item of dive gear from another. When you buy your own gear, you evaluate and choose the features you need and appreciate. The process is fun, adds greatly to your knowledge of diving, and ensures that the gear you dive with does what you want it to, the way you want it to.

You will know how to operate it properly and care for it responsibly. You will know the condition of your gear, where it has been, and who has been using it. That familiarity contributes to the highest level of safety, which in turn gives you peace of mind. Other less obvious but still important benefits accrue from owning dive gear. Buying gear deepens your relationship with your dive store. That store is your conduit to diving. We offer training opportunities, arranges trips, keep you in contact with other divers, and services and support your equipment. Having your own equipment also marks you as a serious, committed diver, and it encourages you to dive regularly and stay involved in the sport.

The bottom line on equipment ownership: It's the way to achieve maximum enjoyment of diving. At Amber Waves Diving we recognize that once a customer buys their own gear they actually become a 'committed diver,' one that we see more than just once a year. Therefore, we believe that part of the commitment you are making to learn to dive should include acquiring your own dive gear. It's an excellent investment in yourself and in your future diving adventures.

The PADI Master Scuba Diver (MSD) rating is considered the highest recreational diving level and is often referred to as the "Black Belt" of scuba diving. PADI Rescue Divers who have also completed 5 individual PADI Specialty Courses can apply for their MSD rating.

Some people take on the challenge just for the rating.

Are 5 Specialty Courses necessary: For the certification? Yes. To broaden your knowledge and skills as a diver? **Absolutely!**

Wherever you're diving in the world, conditions can be unpredictable and the more skills and knowledge you have, the better equipped you are to deal with them.

Let's take wreck diving as an example. The PADI Wreck Diver Specialty consists of 4 wreck dives and will give you the necessary skills to map a wreck, assess the wreck for potential hazards and penetration points and you'll learn how to safely enter a wreck. However, wreck diving also relies on having excellent buoyancy skills, an ability to navigate and deal with low light conditions and what happens if there is some current too? By taking a range of PADI specialties you'll start to see how they overlap and you'll have a broader skill base to act accordingly — in a wide range of situations.

Specialty courses also mean more time with a PADI Instructor. During your PADI training you'll learn more from your instructor than just the content of the course — whether it's just noticing how they use different finning techniques during your drift dives, or watching how regular their breathing bubbles are during a photography course, you'll be absorbing knowledge every fin kick of the way!

Achieving your MSD rating exposes you to at least 5 different diving conditions which you otherwise may not have had the confidence to approach. Diving in different environments is all part of the learning curve and your diving education.

Knowing that you have a broad toolkit of tips and techniques will also give you increased confidence both in and out of the water. You'll find you're more comfortable during your dives and ultimately enjoy them even more.

During your PADI Rescue diver course you'll learn about minimizing the risk of an accident by carefully assessing situations. During your specialty certifications you'll also learn more about assessing conditions for safety, whether it's deciding whether or not to dive a wreck, drift dive or night dive. Your ability to make the right decisions will become stronger and you'll have the confidence to speak up.

It's worth noting that the PADI Master Scuba Diver and PADI Divemaster are two very different courses. The PADI Divemaster is the
