MAKE EVERY WEEKEND A DIVE WEEKEND

AMBER WAVES DIVING REPAIR CENTER

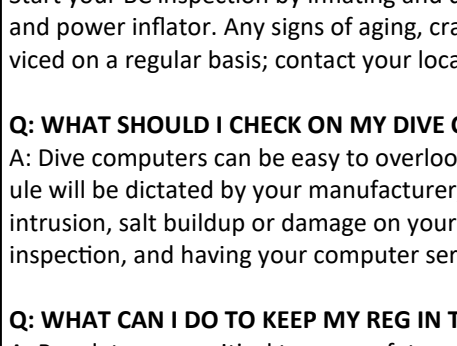

Properly functioning gear is crucial
Your safety depends on it. That's why we are the best technicians in the business to service your gear.

What to expect

We have certified technicians that always follow manufacturer guidelines. Conscientious and thorough, we examine every part of your gear. We're always on the lookout for wear and corrosion, immediately swapping out anything worn or damaged. We want your next dive to be your best dive!

Ask DAN: How To Prepare Your Gear for Dive Season

By Divers Alert Network

Dive season is rapidly approaching, and now is the time to make sure your equipment is as ready to get in the water as you are. Neglected equipment is a contributing factor in many dive accidents, and preventative maintenance is an important step in keeping yourself safe this year. Do you know how to inspect and maintain your equipment?

Dive season is rapidly approaching, and now is the time to make sure your equipment is as ready to get in the water as you are.

Q: HOW DO I ENSURE MY BC IS IN GOOD WORKING ORDER?

A: Buoyancy compensators are typically steadfast and utterly reliable - until they fail. When they do, you're left without a backup, and serious injuries can occur, so it's important to inspect and test your BC before the season starts, and before every dive.

Start your BC inspection by inflating and deflating it to confirm function and taking a close look at your low-pressure inflator hose, dump valves and power inflator. Any signs of aging, cracking or damage are indicators that those pieces need to be serviced or replaced. BCs should be serviced on a regular basis; contact your local dive shop or equipment manufacturer for more information.

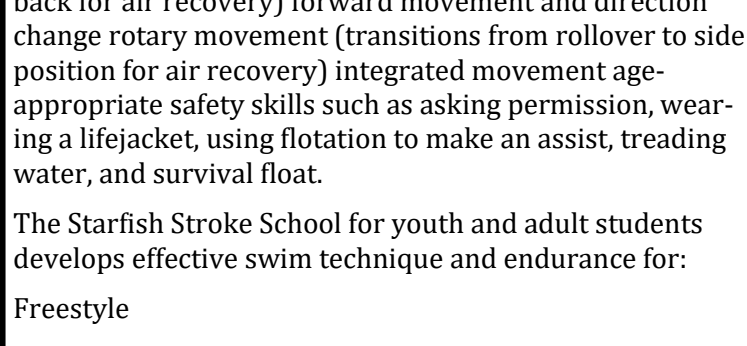

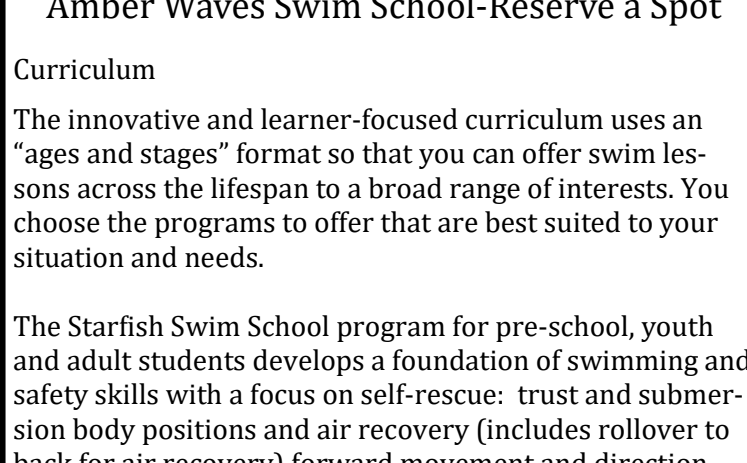

Q: WHAT SHOULD I CHECK ON MY DIVE COMPUTER?

A: Dive computers can be easy to overlook at the beginning of the season, but they require regular maintenance as well. Your maintenance schedule will be dictated by your manufacturer, but it is important to make sure you have fresh batteries, clean O-rings, and no obvious signs of water intrusion, salt buildup or damage on your computer before taking it in the water. Many computers require annual or biannual maintenance and inspection, and having your computer serviced regularly should minimize your risk of having to contend with a computer failure mid-dive.

Q: WHAT CAN I DO TO KEEP MY REG IN TIPTOP SHAPE?

A: Regulators are critical to your safety as a diver, and regular maintenance for both the first and second stage of your regulator is the key to reducing its risk of failure during a dive.

Your regulators should be maintained by a qualified technician every year - or as frequently as the manufacturer recommends - but it is your responsibility to inspect and test the regulator before every dive, and rinse and properly store it afterward. Check your regulator for signs of wear or damage such as cracking on the hoses, O-rings or regulator face plates, swivels that no longer move freely or corrosion on metal connectors. Strange noises, frequent free-flows or difficult work of breathing are also clear indications that your regulator needs to be serviced. Minimize the likelihood of long-term damage from regular wear and tear by replacing your dust cap and rinsing your regulator in clean fresh water after every dive, and storing it in a cool, dry area until your next dive.

apeks AQUA LUNG

The Apeks XTX50 Regulator is what you're looking for in a top of the line regulator, at a reasonable price. The Apeks XTX50 is designed to handle every diving condition you could put it through. It can even be changed from right hand to left hand use, by an authorized technician. You can change out the exhaust tee from a wider tee for minimal bubbles, great for photography, or a more narrow exhaust tee for a smaller more compact regulator. Apeks XTX50 features:

- An over balanced diaphragm design first stage that is environmentally sealed
- Four medium pressure ports, with optional fifth
- Easily converts from right hand to left hand, by factory authorized technician
- Pneumatically balanced second stage
- Diver changeable exhaust tee
- Nitrox compatible

Aqua Lung Leg3rd Regulator

AQUA LUNG

EVERYTHING YOU'D EVER WANT IN A REGULATOR

\$879.00

Aqualung presents us with the Helix, Pro a mid-priced regulator, which enjoys very good performance, undoubtedly above expectations.

It represents the DNA of the Aqualung regulators. It is without Question the best option in terms of value for money currently available.

The Helix Pro version has two added features:

Aqualung's patented ACD system, technology that protects the first stage from accidental entry of water or dirt even when the regulator is not under pressure.

And sealed ambient pressure chamber, suitable for cold and/or polluted waters.

Dive Computer SIRIUS

Mares designed the new Sirius watch-style dive computer with the aim of this dive computer feature top-of-the-range technology both for recreational and Extended Range divers. The recreational diver will see a simple screen, with the possibility of reading tank data thanks to the optional tank module. The Extended Range diver can insert up to five nitrox and trimix mixes to manage technical dives. The interchangeable strap allows the Extended Range diver to use any suit thickness. Its refined style makes the Sirius the perfect accessory, even out of the water. Available in black or black/silver versions.
