Meet Mark Carter our newest PADI Enriched Air Diver. Mark went through our Enriched training Friday morning and is now PADI certified.

Instructor Mark Schwebke having a fun afternoon with these two aspiring SCUBA Divers who completed the PADI Discover Program. Oh, I forgot they happen to be Mark's grand kids.

Pictured above is our Sunday afternoon First Aid-CPR-AED and Oxygen Provider graduates.

TRAINING AT BEAVER LAKE ARKANSAS

Beaver Lake is a man-made reservoir in the Ozark Mountains of Northwest Arkansas and is formed by a dam across the White River only a few hours drive from Wichita. Beaver Lake waters are deep, clean, and clear. Beaver Lake is optimal for scuba diving because the water is deep and visibility is great making for interesting sites. JOIN US TO FINISH YOUR CERTIFICATION!

COME JOIN US FOR A WEEKEND OF FUN

ADVANCED OPEN WATER COURSE

The Advanced Open Water Diver Course (AOW) is the next step in learning advanced skills directly applicable to scuba diving. Frequently, an AOW card is just the ticket to diving at a variety of more sites. For example, we know of several places in the Philippines, Malaysia, Australia, and some wreck sites in Florida who will not let you dive at certain, more advanced sites, unless you have the AOW or above certification. The reason is that the operators don't want to risk putting OW divers into certain advanced level dive conditions such as currents or deep, blue water, environments. They know that PADI AOW certified divers have the skills and experience necessary for such sites.

There are a total of 5 dives necessary to complete the course. The required 2 Core dives are Deep and Underwater Navigation. You can choose the remaining 3 Adventure Dives. This course is for newly certified divers as well as divers with more experience who wish to expand their knowledge and practical skills. Also, if you don't have enough time to complete the full AOW course, the Adventure Diver rating is awarded after completion after any 3 Adventure Dives.

Why should you take the Advanced Open Water Course?

Open Water Divers have learned the basics, the "how" of diving. After a few dives, there is a need to expand that dive knowledge and learn practical skills which can increase your enjoyment of diving. Ever surface far away from the boat and have a long surface swim back? With the Navigation dive, you will learn how to prevent that situation, using compass as well as natural navigational aids to assist in your underwater journey. For deep diving, there are special concerns, and as an Open Water Diver, you are certified to dive 18 meters/60 feet. After completing the AOW course, that level is extended to 30 meters/100 feet.

If you really want to advance your skills and be more comfortable in the water, taking this course is the way to do it. We have openings for the Beaver lake trip. Give us a call and schedule your course today!

PADI DEEP DIVER TRAINING
Now that you have several dives, you may want to do deeper dives. The Deep Diver course will get you over the apprehension of the unknown and give you more confidence through knowledge and experience.

The purpose of the PADI Deep Diver Specialty Course is to familiarize divers with the skills, knowledge, hazards, organization, procedures, techniques, problems, dangers and enjoyment of diving between the depths of 60 feet to 130 feet. The Deep Diver specialty course is intended to serve as a safe, supervised introduction to deeper diving within the limits of recreational scuba diving.

PADI Peak Performance Buoyancy Specialty Course
You've all seen those divers. You know – the ones who seem to move through the water without the slightest effort. Those scuba divers are neutrally buoyant, which means they don't sink or float while diving. Achieving neutral buoyancy is no easy feat, which is why divers who have mastered the skill stand apart from the others. If you want to become neutrally buoyant and become a better scuba diver, take the PADI Peak Performance Buoyancy specialty course.

PADI UNDERWATER NAVIGATOR
Who should take this course?
Be the scuba diver everyone wants to follow because you know where you are and where you're going. The PADI Underwater Navigator course fine-tunes your observation skills and teaches you to more accurately use your compass underwater. If you like challenges with big rewards, take this course and have fun finding your way.

MORE TANKS JUST ARRIVED. COME IN AND PICK YOURS OUT.

Six Advantages of Owning Your Own Set of Scuba Gear

- 1. NOT ALL RENTAL SHOPS ARE EQUAL**
Unfortunately, rental gear can vary from rental shop to rental shop. One rental shop might be hyper-vigilant about keeping their gear in top-notch condition while the dive center next door might be using gear that looks like it's come out of a 1970s thrift shop with regulator mouthpieces that apparently once doubled as teething binkies.
Even if the rental shop or dive center takes pride in maintaining their equipment, careless divers exist everywhere. They're more likely to mistreat and roughly handle equipment that they won't own.
The problem is also that many equipment issues aren't obvious until you start your dive. A warped mask or a leaking hose might not be apparent during the pre-dive check or while you're sorting your equipment, but could pose a problem as soon as you jump into the water.
Reviews for dive centers can't always be trusted either. If the dive conditions and guides were good, reviewers are likely to look past the quality of equipment they rented – if they rented at all. Likewise, many reviews on equipment are left by beginner divers who might not know a well-maintained piece of gear from a poorly taken care of one.
- 2. SAVE TIME FOR FUN**
Every time you go to a new dive shop in search of rental equipment, you'll have to spend time sorting and trying on multiple sizes of gear. If you're on vacation, wouldn't you rather spend that time sipping a coconut or exploring the nearby paradise?
You'll want to get to your dive shop as early as possible if you're diving during a busy time of the year. Divers fighting for the last medium sized BCD can quickly turn into an all-out war. All it takes is one extra person with your size to snatch the last pair of fins. It's annoying to have to arrive early, try on equipment, and hope for the best during a time when you could be doing better things.
When you own your own set of equipment, you can simply show up right before the dive and go.
- 3. A PERFECT FIT, EVERY DIVE**
There is no standard sizing when it comes to wetsuits, BCDs, masks, and other pieces of dive gear. You might be a size small in one brand of wetsuits, but a medium in another. Some brands distinguish sizes by male and female, while others don't. Rental shops vary in what brands they carry and what sizes. Even if you know that you're a size medium in a certain brand of BCD, they might all be rented out – leaving you with an ill-fitting set up.
Many times, it's impossible to see whether something fits correctly until you start diving. Those fins might feel great in the shop, while you're standing on dry land, but are they comfortable finning in the water?
Wetsuits are another item that are notoriously hard to fit into. Too big, and you'll have now thermal protection as a neutrally buoyant water balloon. Too small, you might be too restricted to move. Owning your own set of gear means that you'll know that on every single dive, you'll have equipment that fits properly.
- 4. FAMILIARITY WITH GEAR MEANS SAFER DIVING**
According to Alert Diver, equipment problems account for 15 percent of all diver-related deaths. This isn't necessarily because there was something wrong with the equipment – in fact, it's almost always due to user error. When divers are unfamiliar with equipment or don't maintain it properly, they're likely to use it incorrectly.
Imagine going onto someone's laptop – who has a different model and setup to yours – and sending an email. A task that might take you literally one minute on your own laptop might take a few minutes on someone else's, even though you have the same general equipment. It's similar to diving. Though most gear is generally the same, it takes practice and time for tasks to become second nature.
Even if you're renting, it's important to be familiar with what you're getting. Owning your gear is the best way to become familiar with how to use everything and respond to any problems without panic.
- 5. BETTER DIVE GEAR KNOWLEDGE**
Continuing from the safety point above, owning your own set of scuba gear gives you a better understanding of what each piece of equipment does and how it should be maintained. This makes you a more skilled diver overall and teaches you how to look for flaws in rental equipment in the future. Are you unsure how scuba gear is supposed to fit?
- 6. YOU'LL DIVE MORE OFTEN**
Once you own your dive equipment, you can dive more spontaneously and more frequently. Are your friends are going diving? You'll have no excuse not to join them, especially since the days of suffering through the frustrating rental process are over.
Mentally, you'll also want to lower the cost per dive by getting as many dives out of your equipment as possible. Hence, you will dive more and getting excited about your next dive is exactly why we love the sport.

APEKS AQUA LUNG

The Apeks GTX50 Regulator is what you're looking for in a top of the line regulator, at a reasonable price. The Apeks GTX50 is designed to handle every diving condition you could put it through. It can even be changed from right hand to left hand use, by an authorized technician. You can change out the exhaust tee from a wider tee for minimal bubbles, great for photography, or a more narrow exhaust tee for a smaller more compact regulator. Apeks GTX50 features:

- An over balanced diaphragm design first stage that is environmentally sealed
- Four medium pressure ports, with optional fifth
- Easily converts from right hand to left hand, by factory authorized technician
- Pneumatically balanced second stage
- Diver changeable exhaust tee
- Nitrox compatible

\$749.00

SCUBAPRO MK19 EVO/G260 REGULATOR

\$1,049.00

The MK19 EVO/G260 regulator is perfect for ANY CONDITIONS, ESPECIALLY those who dive deep, in cold water, or in silty environments. This system is ideal for harsh conditions, making it a top choice for tech divers and cave explorers. The compact MK19 EVO is fully sealed, ensuring trouble-free operation in cold or murky waters. The G260 is a highly-iterated air-balanced second stage with metal components and a left-right hose attachment option, making it excellent for tech diving setups and a consistent top performer.
